

Identifying Labor Sheds

For

West Virginia's Counties

Based on Commuting Patterns from the 2000 Census of Population

A Presentation To The
West Virginia GIS Conference
June 11, 2008

Presented by

Chuck Peterson, CEcD, Manager
Research and Planning Unit
West Virginia Development Office
Building 6, Room 620
Charleston, West Virginia 25305
304-957-2057 cpeterson@wvdo.org

What is a “Labor Shed”?

- A region from where a county gets most of its labor force.
- Based on the US Census Bureau’s 2000 Census, “County-To-County Worker Flow Files”
- Is not limited by political geographies.

Process of Identifying West Virginia’s Labor Shed

- For each West Virginia county, examined where its workforce lived, looking for a “natural break.”
- Generally, a county had to contribute at least 40 workers to be considered part of the labor force.
- Mapped, by county, where the county’s labor force lived and commuted from.
- Considered distance, access to major highways and natural barriers such as rivers.
- Then asked the question “Is this a stretch to include this county in the labor shed?”
- Presented initial results to county and regional economic development organizations for comment and update.

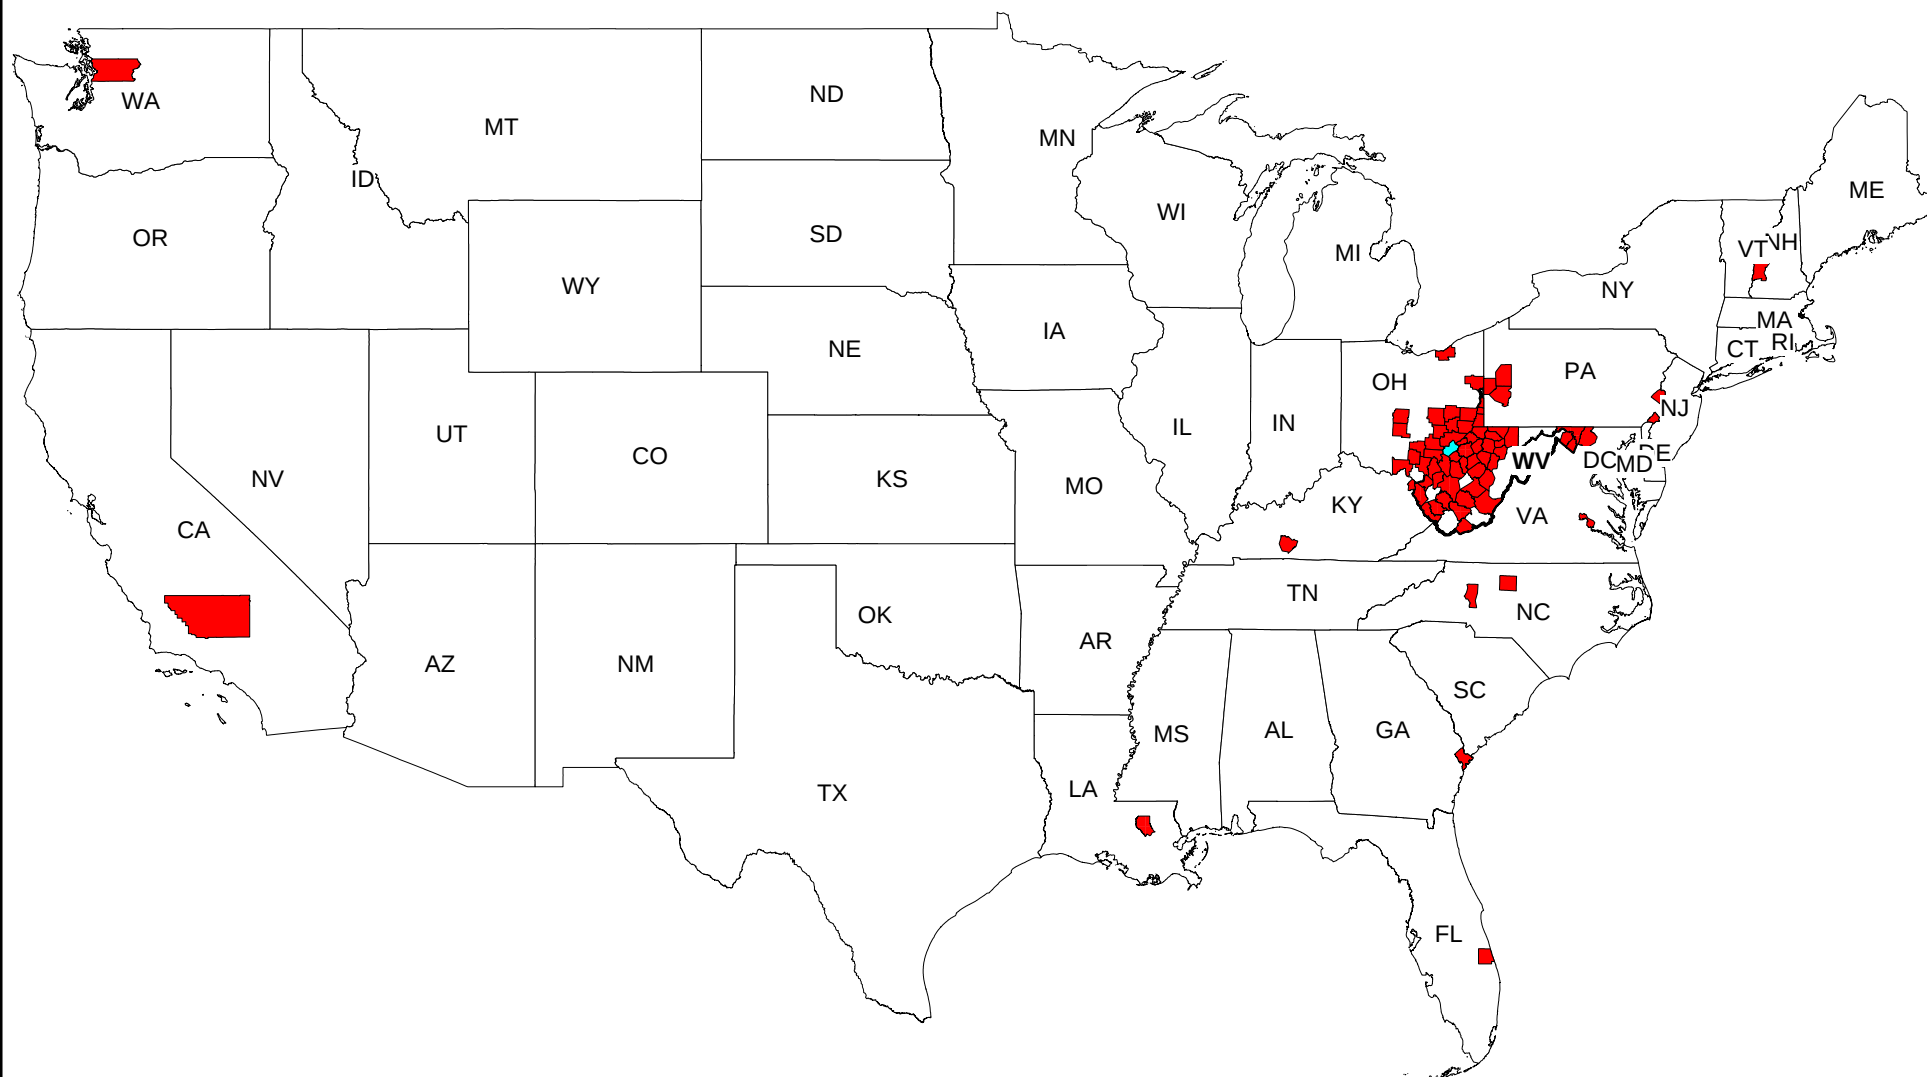

Expected Outcomes

- A realistic and defensible analysis of each county's true available labor force.
- A framework to identify the available labor force, by skill and wage level.
- To serve as marketing material for:
 - ✓ West Virginia Development Office
 - ✓ State's local and regional economic development programs
 - ✓ Companies considering West Virginia
 - ✓ Site location consultants
- Ultimate goal is to have an online database where you can determine each county's labor shed, including:
 - ✓ Total population
 - ✓ Total Labor Force and employment statistics
 - ✓ Occupations and wages, by the Workforce Investment Areas that make up each county's labor shed.

Parkersburg / Wood County will serve as an example of our approach

Where Wood County, West Virginia's Workers Live
